This reference manual describes the syntax and “core semantics” of the language. It is terse, but attempts to be exact and complete. The semantics of non-essential built-in object types and of the built-in functions and modules are described in The Python Standard Library. For an informal introduction to the language, see The Python Tutorial.

The Python Language Reference — Python 3.8.4 documentation

Master Python—the versatile cross-platform development language. This complete reference contains distinct sections, each concentrating on a core angle of the language, including applying the Python libraries, application development, and Web and cross-platform development. This is an ideal resource for any programmer migrating from another language.

Home » [Strings in Python - The Complete Reference](#) [Strings in Python - The Complete Reference](#) [Strings in Python](#) are amongst the widely used data types and are created by enclosing characters in quotes.

Strings in Python - The Complete Reference - AskPython

The syntax for string formatting is described in the Python Library Reference, section printf-style String Formatting. The floor division operator, the modulo operator, and the divmod() function are not defined for complex numbers. Instead, convert to a floating point number using the abs() function if appropriate.
