The Social Construction Of Dementia

In this study the social construction of dementia is examined closely for the first time. Nancy Harding and Colin Palfrey show how Western society sees dementia as a disease, rather than a natural part of the ageing process. They take issue with the constructed view of the body as a machine, whose parts 'break down' and need replacement.

Three broad theoretical models underpin dementia care policy (as well as practice and research): biomedical, psycho-social and social-gerontological. These are critically assessed and discussed in relation to illustrative examples of dementia policy across three policy regions of the devolved UK.

Developing theoretical understandings of dementia and ...

The social construction of AD and its 1971 listing as a disease directly relates to the ways in which society views people with ADRD. What scares people most about Alzheimer's and other related dementia is that these conditions are beyond an individual's control, yet they transform one's perception of their identity and sense of self beyond all recognition.
